Kostiantin Troianivski *Senior Full Stack Engineer (AI-Assisted)*

troyankostandd@proton.me +40 793 862 988 Str. Gheorghe Doja 174, Arad, Romania
https://www.linkedin.com/in/konstantin-troyanivski-b0603a3b0/ https://github.com/troyankostandd

Senior Full Stack Engineer with 8+ years of experience transforming development-level platforms into production-grade, AI-assisted systems. Daily user of AI coding assistants (Cursor, Copilot, Claude) to accelerate development, refactor, and secure code; proven track record in hardening security-sensitive on-premise deployments, migrating legacy stacks to modern microservices on Kubernetes, and integrating RAG/LLM pipelines into enterprise SaaS. Strong front-end (React/Next.js, TypeScript) and back-end (Node.js/Nest, Python/FastAPI) expertise with deep focus on DDD, clean architecture, and high-availability, end-to-end ownership.

SKILLS

Cloud & DevOps: AWS (IAM, EC2, S3, RDS, Lambda), GCP, Azure, Kubernetes, Docker, CI/CD Tools, Terraform, GitHub Actions, GitLab CI, Jenkins, CircleCI, Vercel

Frameworks and Libraries: React, Next.js, Vue.js, Zustand, Redux/RTK, Tailwind CSS, Material UI, Node.js, Nest, FastAPI, Django, Django Restful Framework, Laravel, Spring Boot, .Net

Programming Languages: JavaScript, TypeScript, Python, PHP, Java, C#

Databases & Data: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Kibana, DynamoDB, ORM/ODM (Prisma, TypeORM, Sequelize, Mongoose)

Other Technologies: SEO best practices, RESTful APIs, GraphQL, WebSockets, Event-driven architecture, Microservices, Domain-Driven Design (DDD), Security best practices (OWASP), RAG systems, LLM integrations

EDUCATION

Politehnica University of Bucharest
Bachelor's degree in Information Technology
10/2010 - 06/2014
Bucharest, Romania

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer (AI-Assisted) *Netguru*

11/2021 - 11/2025 | Warsaw, Poland (Remote)

- Spearheaded the evolution of a customer-facing analytics SaaS serving ~18k monthly users into a production-grade, AI-assisted platform by refactoring React/Next.js components, introducing server-side rendering (SSR) for SEO, and leveraging Cursor-driven code generation to accelerate feature delivery while enforcing security checks and static analysis.
- Led migration of a legacy PHP reporting backend to a NestJS (TypeScript) microservice hosted on AWS EC2, containerized with Docker and orchestrated on Kubernetes, implementing robust IAM policies, TLS, and hardened runtime environment; optimized PostgreSQL queries with strategic indexing and query tuning to sustain peak traffic loads.
- Designed and deployed internal admin portals using Vue.js and TypeScript, employing AI-assisted development for rapid prototyping; introduced JWT-based authentication, audit logging, and role-based access control to meet enterprise security standards.
- Orchestrated comprehensive CI/CD pipelines (GitHub Actions + Jenkins) with automated security scans, code signing, and staged rollouts; reduced deployment failures to <5% and rollback times to under 10 minutes, embedding AI-generated code validation steps.
- Implemented Redis caching layers and RabbitMQ background workers to decouple request-heavy workloads, improving request latency by 40% during traffic spikes; introduced Kubernetes autoscaling policies and health-check mechanisms for high availability.
- Built a nightly data synchronization service with FastAPI (Python) that ingested external feeds, performed transformation, and indexed data into Elasticsearch; utilized AI-assisted scripting to maintain code quality across Python and TypeScript modules.
- Applied Domain-Driven Design and Clean Architecture to decompose a monolith into independent services, enabling on-premise deployment with air-gapped network isolation; performed security hardening per OWASP Top 10 and ensured compliance with enterprise data policies.
- Mentored junior engineers, conducting AI-code review sessions, pair-programming with AI tools, and fostering a culture of security-first, production-grade development.

Full Stack Engineer *Dashbouquet Development*

10/2017 - 11/2021 | Warsaw, Poland (Remote)

- Developed and shipped a user management dashboard with React and Next.js, introducing SSR and AI-assisted component generation; integrated NestJS backend services with TypeScript for user authentication and product data, using AI-generated scaffolding to expedite feature delivery.
- Designed RESTful APIs for an e-commerce marketplace platform, employing GraphQL for selective data fetching; secured API endpoints with rate limiting, JWT validation, and automated vulnerability scanning using AI-assisted code review.
- Optimized PostgreSQL performance via connection pooling, read replicas, and query refactoring; introduced Docker containers and orchestrated them on Kubernetes clusters for consistent environment management.
- Integrated third-party payment and shipping gateways, handling mismatched data formats and authentication issues; performed AI-assisted debugging and automated testing to reduce integration defects.
- Established CI/CD pipelines using GitHub Actions, embedding AI-generated linting and test scripts; collaborated with design team to implement responsive UI with Tailwind CSS and Material UI, ensuring accessibility compliance.

Junior Full Stack Engineer *VOIS Romania*

07/2014 - 09/2017 | Bucharest, Romania (On-Site)

- Built small web features using JavaScript/TypeScript and React, leveraging AI coding assistants (Copilot) for boilerplate generation while adhering to security best practices; added unit tests and API documentation to support QA.
- Implemented basic REST endpoints in Node.js/Express and Java/Spring Boot under senior guidance, applying AI-generated boilerplate and security patches; performed SQL queries for simple reports and data validation tasks.
- Fixed bugs and delivered minor enhancements based on QA tickets; contributed to AI-assisted code reviews and improved code readability and maintainability.
