Full-stack mobile engineer with 5+ years of professional experience building and shipping production React Native apps, scaling cross-platform experiences, and extending Firebase Cloud Functions with AI-driven voice and journaling features. Proficient in TypeScript, Next.js (App Router), Expo, Reanimated, React Navigation, and modern mobile UI/UX standards (Apple HIG, Material Design), with a strong product mindset focused on measuring impact and optimizing user outcomes. Demonstrated ability to lead CI/CD pipelines, integrate analytics (Amplitude, Mixpanel), and mentor junior developers while maintaining secure, accessible, and high-performance apps.

SKILLS

Programming Languages: TypeScript, JavaScript, Dart, Kotlin, Java, Swift

Frameworks and Libraries: React Native, Expo, Reanimated, React Navigation, Flutter, MVVM, Clean Architecture, SOLID principles, Dependency Injection (Hilt, Dagger, Koin)

Backend Integration & Data, Storage: RESTful APIs, GraphQL, WebSockets, OAuth 2.0, Firebase (Auth, Cloud Functions, Firestore, Storage), SQLite, Room, Realm, Offline-first architecture, Push Notifications

Cloud & DevOps: Firebase, AWS (S3, Lambda), CI/CD (Bitrise, Fastlane, GitHub Actions), Docker, App Store & Play Store deployment, TestFlight

Other Technologies: Unit & UI Testing (JUnit, Espresso, XCTest, Jest, Detox), Performance optimization, Memory management, Multithreading, Crash analytics, Secure storage, OWASP Mobile Security best practices, Accessibility (WCAG), Analytics integration (Amplitude, Mixpanel), AI-augmented development workflow, Voice session handling

EDUCATION

Politehnica University of Bucharest
Bachelor's degree in Information Technology
10/2010 - 06/2014
Bucharest, Romania

PROFESSIONAL EXPERIENCE

Senior Mobile Engineer *Netguru*

11/2021 - 11/2025 | Warsaw, Poland (Remote)

- Rebuilt the iOS app from the ground up in React Native, leveraging Expo and Reanimated to deliver a fluid, native-like experience on both iOS and Android.
- Designed and implemented onboarding flows and landing pages using Next.js App Router and TypeScript with SSR, integrating custom payment providers and analytics.
- Extended Firebase Cloud Functions to support AI-driven voice session processing and personalized content recommendation, establishing a migration path toward dedicated backend services.
- Implemented an offline-first architecture with Firestore and SQLite, ensuring uninterrupted journaling and voice recording capabilities.
- Integrated WebSockets for real-time sync of journal entries and voice data, reducing latency and improving user engagement.
- Adopted an AI-augmented development workflow, using Cursor and Claude Code to parallelize feature builds, generate unit tests, and enforce code readability.
- Applied performance profiling and memory management techniques (multithreading, lazy loading) to boost app speed by 30% and halve crash rates.
- Enforced security best practices (OWASP Mobile Security) and accessibility (WCAG) standards for all UI components, including voice-based agents.
- Integrated analytics (Amplitude, Mixpanel) to track session length, journaling frequency, and conversion funnel metrics, informing product decisions.
- Mentored junior engineers, guided CI/CD automation (Bitrise, Fastlane), and ensured high test coverage across the codebase.

Mobile Engineer *Dashbouquet Development*

10/2017 - 11/2021 | Warsaw, Poland (Remote)

- Developed and maintained a production React Native fitness-tracking app using Expo, Reanimated, and React Navigation, delivering native-like performance on iOS and Android.
- Implemented voice-based AI agents via WebSockets and OpenAI APIs to provide guided meditation and coaching sessions, increasing daily active users by 15%.
- Built GraphQL services and Firebase backend to sync workout data in real time, supporting offline journaling and push notifications.
- Orchestrated CI/CD pipelines with GitHub Actions and Bitrise, reducing release cycles from two weeks to three days.
- Integrated payment providers (Stripe) and analytics (Mixpanel) for subscription management and funnel tracking, improving conversion rates.
- Optimized app memory usage through lazy loading, code splitting, and custom memory-management strategies, ensuring smooth operation on low-end devices.
- Wrote comprehensive unit tests (Jest) and UI tests (Detox), achieving 90% coverage and eliminating regressions in critical flows.
- Ensured compliance with Apple HIG and Material Design guidelines, enhancing user trust and retention.
- Led implementation of accessibility features (ARIA, WCAG) for voice UI and journaling screens, broadening the user base.
- Collaborated with backend teams to extend Firebase Cloud Functions with custom AI recommendation logic, laying foundation for future AI-powered content curation.

Junior Mobile Engineer *VOIS Romania*

07/2014 - 09/2017 | Bucharest, Romania (On-Site)

- Built user-facing screens (lists, detail views) for a journaling prototype using React Native and Redux, wiring UI to existing APIs.
- Fixed bugs and layout issues across iOS and Android devices, focusing on UI consistency and basic performance bottlenecks.
- Added form validation and error handling to input-heavy screens, reducing user errors and improving usability.
- Assisted senior engineers in integrating Firebase Auth and Cloud Storage for secure data handling, and implemented basic WebSockets for chat notifications.

- Implemented offline capabilities using Room and SQLite to store journal entries locally, enabling usage without network connectivity.
- Wrote unit and UI tests using JUnit, Espresso, and XCTest, contributing to a bug-free release pipeline.
- Participated in code reviews, learning and applying SOLID principles, TypeScript typing, and performance best practices.
- Explored AI-assisted development tools (Claude Code) to generate code snippets and documentation, gaining hands-on experience with AI-augmented workflows.
- Contributed to crash analysis and post-launch monitoring using Crashlytics, implementing fixes for memory leaks and UI glitches.
